

esco Special hide salt

Pure and high quality rock salt

- ✓ Anti-bacterial
- ✓ No salt dust build-up
- ✓ Various grain sizes

Field of application

esco special hide salt is ideal for the traditional preservation and preparation of cow, calf and pig skin as well as sheep skins. The excess water is removed from skins by using hide salt. The salt also has an anti-bacterial effect and protects the hides from decay. These quality characteristics allow the hides to be stored and ensure the best possible preparation for the tanning process.

Product

esco hide salt is a high-quality product extracted from our own salt mines. Our product range comprises different rock salt grains together with a special preparation for various hide applications. This special preparation keeps the salt silky, enabling it to be distributed evenly over the hide and giving it excellent adhering properties. Separation and salt dust are no longer a problem.

- ◆ Constant quality control
- ◆ Various grain sizes
- ◆ Anti-bacterial
- ◆ Spreadable salt emulsion
- ◆ No salt dust build-up

Product quality

The deposits for esco rock salt, from which esco special hide salt is extracted, are located in the north part of Germany. They feature a naturally high proportion of pure white salt crystals. At esco, we take the quality and safety of our products very seriously. We guarantee consistently high product quality through continual quality checks and seamless traceability.

Certification

esco production facilities hold a valid certification to EN ISO 9001.

Service

We offer our customers first-class service, guaranteed consistently high product quality and a very reliable international delivery.

Note

This product is not suitable for food production or for use in food-related applications (e.g. in gelatin or collagen). The recycling of used hide salt runs the risk of microbiological contamination and is therefore not recommended.
