AXAL® Pro salt tablets –
for top quality water

- ✓ EN 973 Type A
- ✓ EN 14805 Type 1
- ✓ NF Standard
- ✓ Codex Alimentarius

Field of application

In many industrial and commercial applications, soft water is essential and is used in the worlds of gastronomy and hotels as well as in hospitals and laundrettes. AXAL® Pro salt tablets offer perfect properties for use in medium to large water softening systems based on ion exchanger resins.

The result is efficient, problem free water softening with all the advantages, such as less limescale build-up, a longer service life for installations and equipment, less energy consumption and better performance, fewer problems in day-to-day operations running, a reduction in the amount of detergent needed and time and money savings on care and maintenance.

- ◆ Purity
Outstanding performance and a long service life for the water softener thanks to a minimum sodium chloride content of 99.9 %
- ◆ Solubility
No residues in the salt container thanks to an insoluble ingredients content of less than 0.01 %
- ◆ Form
No clumping of the salt in the brine tank due to its patented form
- ◆ Stability
No build up of salt sediment in the brine tank due to a stable form and low ratio of fine particles

Product quality

Strict quality demands are made on special salts for the regeneration of water softening systems so that they do not impair the function of the ion exchanger material. By satisfying the purity criteria and testing requirements of the European EN 973 Type A and EN 14805 Type 1, Codex Alimentarius and NF standards, AXAL® Pro salt tablets provide the ideal means for generating soft water. The salt used to make AXAL® Pro also complies with the quality requirements for food grade salt.

Product properties

AXAL® Pro salt tablets are made from high-purity, fully soluble vacuum salt. This special salt is free from additives that could impair the function of the ion exchanger. AXAL® Pro salt tablets contain no harmful ingredients, are completely soluble and are resistant to decay. The patented, convex form of the AXAL® Pro salt tablets and their low content of fine particles ensure maximum solubility and dissolving speed.

Production process

The vacuum salt used to make AXAL® Pro salt tablets is compacted at high pressure using a special manufacturing process under controlled conditions. This evenly-applied pressure prevents the premature crumbling of the salt tablets and minimizes the degree of salt dust.

Service

We offer our customers first-class service, guaranteed consistently high product quality and very reliable deliveries, even across national borders.

The company

esco – european salt company is the leading salt producer in Europe and exports significant quantities overseas. Water softening products are constantly being developed and exceed legal requirements. This is made possible by the company's extensive experience in the water softening products market.
