

esco DI-MIX®

Fast-acting de-icing agent

- ✓ High efficiency
- ✓ Free-flowing properties
- ✓ Controlled quality

Field of application

esco DI-MIX® is used as a fast-acting de-icing salt to remove snow and ice, suitable for all applications.

Product

esco DI-MIX® is a particularly effective mixture of pure calcium chloride and crude rock salt. The exothermicity of calcium chloride guarantees an immediate thaw process. Within the first 15 minutes, calcium chloride melts up to 4 times more ice compared to standard road salt. This ratio even increases with lower temperatures. The crude rock salt ensures the required delayed action in the event of thicker layers of ice and snow. DI-MIX® is extremely qualified for very low temperatures and appropriate for usage in critical places (sloping streets, bicycle paths, ...)

- ◆ 4 times more efficient than standard road salt
- ◆ Active at very low temperatures
- ◆ Solubility almost 100 %
- ◆ Suited for long-time storage

DE-ICING

esco DI-MIX®

Fast-acting de-icing agent

Product range

Packaging size: 25 kg bag (48 x 25 kg per pallet)
50 kg bag (24 x 50 kg per pallet)
1,000 kg Big Bag
Bulk tipper or pneumatic silo upon request

Type of packaging: PE bag

We would be happy to provide you with a sample.

Product quality

esco DI-MIX® is a valued blend of 30–35% calcium chloride and 65–70% crude rock salt. Through its unique composition, esco DI-MIX® remains free-flowing. The rock salt is a mined product exploited by esco in 3 locations in Northern Germany. Our production facilities range among the most state-of-the-art of their kind in Europe. The pure calcium chloride and the high content of sodium chloride

in the rock salt provide for an outstanding product quality of esco DI-MIX®. All esco sites hold valid certifications according to EN ISO 9001.

Service

We offer our customers first-class service, guaranteed consistently high product quality and very reliable deliveries across the whole of Europe thanks to highly effective logistics.
